

It's a Trap!

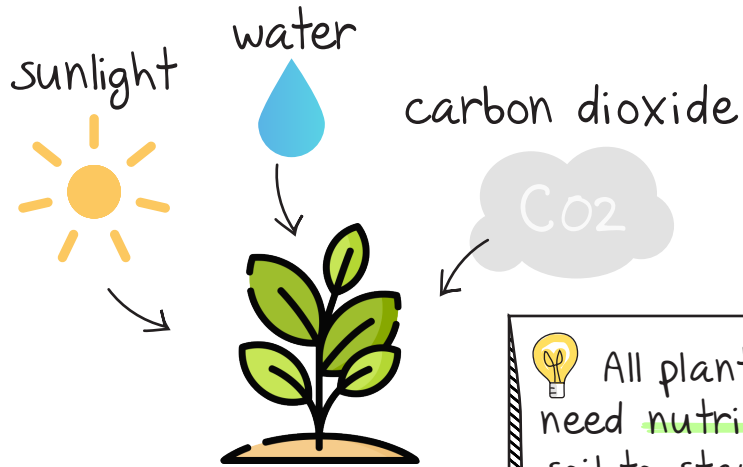

~ Carnivorous plants ~

😊 **Did you know?**
About 630 species of carnivorous plants have been discovered so far!

A **carnivore**, like a tiger or a wolf, eats **meat** to live.

Some plants are carnivores too!
They still make some of their food from:

💡 All plants also need **nutrients from soil** to stay healthy.

Carnivorous plants grow in **nutrient-poor** soil, so they catch bugs and other small prey for extra nutrients. Some use...

Examples:

Venus flytrap,
waterwheel plant

Sticky Traps

Sundew,
butterworts

Pitfall Traps

Pitcher plants
